Questions and draws have different roles

Primary panel: 50 questions

50 questions × 8 draws × 2 modes = 800 responses

400 paired states; draws A = 0–3 and B = 4–7

One outer fold, four-draw A → B direction

Fit on 40 questions
Use draw half A

→

Test on 10 excluded questions
Use draw half B

Repeat over five question folds; also evaluate B → A.

Later controls and post-hoc checks reuse these 50 questions.

Separate panel: 64 questions

Two solvers; 512 responses

Cap subset: 11 of the 64

18 matched pairs; 2k vs 4k cap

Fresh guard: 228 questions

Refit on 128 development states, then freeze before collection.

228 direct + 1 thinking response
Only one action changes.

The dashed link is design influence; the fresh questions are disjoint.
